### WATER QUALITY AQUATIC INVASIVE PLANT FUNDING AGREEMENT

BETWEEN

THE STATE OF WASHINGTON DEPARTMENT OF ECOLOGY

AND

LEWIS COUNTY NOXIOUS WEED CONTROL

This is a binding Agreement entered into by and between the state of Washington, Department of Ecology, hereinafter referred to as “ECOLOGY,” and Lewis County Noxious Weed Control, hereinafter referred to as the “RECIPIENT,” to carry out with the provided funds activities described herein.

#### GENERAL INFORMATION

Project Title:	Control of Early Infestation of Eurasian Watermilfoil at Mineral Lake, WA
Total Cost:	\$90,000.00
Total Eligible Cost:	\$80,000.00
Ecology Share:	\$60,000.00
Recipient Share:	\$20,000.00
The Effective Date of this Agreement is:	07/01/2021
The Expiration Date of this Agreement is no later than:	06/30/2023
Project Type:	Early Infestation

#### Project Short Description:

Eurasian watermilfoil, a class B noxious aquatic weed, was first observed at Mineral Lake, WA, in the fall of 2020. Due to the significant threat posed by this invasive species, both to the aquatic ecosystem and to the economic base of the community, the RECIPIENT will work on eradication of the watermilfoil from the lake.

#### Project Long Description:

Mineral Lake is a naturally occurring lowland lake located in the NE portion of Lewis County, Washington eventually feeding into the Nisqually River. Eurasian watermilfoil was first observed in the southern portion of the lake by Lewis County Noxious Weed Control (LCNWCB) in the fall of 2020. Subsequent survey work conducted by ECOLOGY confirmed the presence of milfoil at several locations along the perimeter of the lake.

Recognized as an aggressive invasive species, milfoil forms dense mats that shade out and compete with native

vegetation, degrading water quality, inhibiting water flow and fish movement, and impacting recreational activities. Milfoil is classified as a Class B noxious weed by the Washington State Noxious Weed Control Board (WSNWCB), and is designated for control by the LCNWCB in regions where the species is not yet widespread. There are no known populations of milfoil in the river system below Mineral Lake. Alder Lake and Alder Lake Dam, located downstream of Mineral Lake, on the Nisqually River, should be of great concern, as milfoil is not yet known to present, however, could pose significant threats to the infrastructure of the dam if milfoil were to establish itself there. Additionally, due to its close proximity to Mt. Rainier National Park and Gifford Pinchot National Forest, it is also possible that milfoil could be spread from Mineral Lake to the high elevation lakes within these nature preserves from boating, kayaking, fishing, or other recreational activities.

Due to its early detection, and the relatively low infestation level, a rapid response with herbicidal treatment would be the best approach to keep the milfoil population under control; prevent its spread into downstream portions of the watershed; preserve the recreational and wildlife habitat value of the lake; and prevent negative impacts to the community's economic base.

Overall Goal:

The overall project goal is to eradicate the new infestation of Eurasian watermilfoil, and reduce the distributions and density of other invasive plants in and around Mineral Lake.
