WATER QUALITY AQUATIC INVASIVE PLANT FUNDING AGREEMENT

BETWEEN

THE STATE OF WASHINGTON DEPARTMENT OF ECOLOGY

AND

LEWIS COUNTY NOXIOUS WEED CONTROL

This is a binding Agreement entered into by and between the state of Washington, Department of Ecology, hereinafter referred to as “ECOLOGY,” and Lewis County Noxious Weed Control, hereinafter referred to as the “RECIPIENT,” to carry out with the provided funds activities described herein.

GENERAL INFORMATION

Project Title:	Lewis County Plummer Lake Brazilian elodea Eradication Project
Total Cost:	\$71,500.00
Total Eligible Cost:	\$71,500.00
Ecology Share:	\$53,625.00
Recipient Share:	\$17,875.00
The Effective Date of this Agreement is:	07/01/2023
The Expiration Date of this Agreement is no later than:	06/30/2025
Project Type:	Aquatic Invasive Plant Project

Project Short Description:

The RECIPIENT will eradicate the infestation(s) of Brazilian elodea (*Egeria densa*) in Plummer Lake in Centralia, Washington. This *Egeria densa* population has been identified as the point source of the *Egeria densa* infestation throughout the entire upper Chehalis River basin.

Project Long Description:

The project will target the Brazilian elodea (*Egeria densa*) infestation in Plummer Lake, located at 46.7159° N, 122.9736° W, near northbound Interstate 5 in Centralia, WA, with multiple chemical treatments, consisting of an application of Littora (Diquat Dibromide) and three applications of SonarONE (Fluridone), both preceded and followed by biobase surveys to map the infestations. Tens of thousands of dollars have been spent cumulatively by this and other interested agencies on Brazilian elodea infestations in Plummer Lake and the downstream areas of the Chehalis River in prior decades. Experts believe the lake has historically proven difficult to treat for this aquatic noxious weed species due

to the presence of a thermocline preventing adequate dispersal of herbicides in the water body and extremely low visibility preventing adequate manual removal and targeting of individual plants. Our aquatic invasive plant experts in AquaTechnex now believe they have the technology to address these difficulties, circumventing it by mapping the specific locations of plants with a combination of BioBase surveys and other methods in order to know where to lower the application hoses below the thermocline and thus target and reach each plant.

Overall Goal:

The overall goal will be the long-term eradication of Brazilian elodea (*Egeria densa*) from Plummer Lake.
