Subject: Re: oblique aerial integrations in Flex Map, follow up

Matt,

I just got your message and I have been able to collect some information for you on your question. I apologize for not being able to call you back and answer you on the phone. I am at a conference this week and phone calls are very difficult at this time.

Flex integrates solely with Eagleview Imagery at this time. I have started a discussion with our product folks who are also at the conference this week to inquire if there are plans to add additional imagery/pictometry options in the future and they do not have that on the road map. If there is another vendor that you are considering that would provide you a better solution than Eagleview I would like to work with you to submit that to our product idea portal for tracking.

Respectfully,

McKenzie Wright

Hi McKenzie,

I just left a voice mail for you quickly restating the question that I have about this topic. I apologize if I'm not explaining it well. I'm hoping that if we can talk directly, I may be able to explain it better. I don't think it would take long at all.

Do have a few minutes this afternoon or tomorrow for a call?

Cheers,

Matt
